

CALL FOR ABSTRACTS

Water Reuse and Desalination: Water Scarcity Solutions for the 21st Century
November 15-17, 2010
Sydney, Australia

Abstract Subject Areas

- Agricultural reuse
- Alternative drivers of water reuse
- Concentrate/brine management and disposal
- Conveyance, distribution, and storage system design
- Desalination case studies
- Advanced disinfection technologies
- Public education and outreach
- Environmental impacts – desalination
- Energy-water nexus – energy impacts, climate change, drought planning and management
- Environmental enhancement reuse
- Financing, pricing, and economics – desalination
- Financing, pricing, and economics – reuse
- Green building and reuse applications
- Natural Systems – including ASR and SAT
- Health effects and risk assessment
- Industrial reuse
- Membranes and MBRs
- Pharmaceuticals, personal care products, trace organics
- Operations/maintenance and operator issues
- Planning for water reuse and desalination
- Potable reuse
- Public acceptance/perception
- Regulatory, institutional, and legal issues – desalination
- Regulatory, institutional, and legal issues – reuse
- Salinity management
- Sustainability through reuse and desalination
- Source water augmentation for potable use
- Treatment technologies – desalination/reuse
- Urban reuse – golf courses, parks, landscape, residential
- Innovative reuse applications
- Research – Water Reuse and Desalination
