

ENABLING THE WATER RESOURCES UTILITY OF THE FUTURE WEBINAR SERIES

Achieving and Maintaining Economic and Social Health for the Community

The landscape that has traditionally driven clean water utilities is changing rapidly. Today's utility managers are no longer just treating and discharging wastewater. They are looking for ways to optimize their efficiency through new technology and data, recover valuable resources, provide meaningful employment opportunities, and enhance their contribution to the overall health of watersheds and their communities.

As "anchor institutions" in their communities, these Utilities of the Future employ innovative approaches not only to meet their own goals, but also to support the financial and social health of the communities they serve. Please join NACWA, WEF, U.S. EPA, WateReuse, and WE&RF for this webinar describing how leading clean water utilities are using innovative approaches to enhance the overall economic and social well-being of their operations and communities.

May 16th, 2019
2:00-3:30pm Eastern Time

Speakers:

Andrada Butler, Administrative Services Manager
City of Atlanta Department of Watershed Management

Mark Poling, Director of Business Operations
Clean Water Services – Hillsboro, Oregon
