

Fact Sheet

National Blue Ribbon Commission for Onsite Non-potable Water Systems advances best management practices to support the use of onsite non-potable water systems for individual buildings or at the local scale. We are committed to protecting public health and the environment, and sustainably managing water—now and for future generations.

Context

As water supplies become more strained, climate change persists, and populations grow, communities are looking for new ways to develop and manage local water supplies and increase the resiliency of water infrastructure. Onsite water systems collect graywater, wastewater, stormwater, rainwater, and more, and treat it so that it can be reused in a building, or at the local scale for non-potable needs such as irrigation, toilet flushing, and cooling. These systems are usually integrated into the city’s larger water and wastewater system and contribute to a more resilient and sustainable water management by using alternate water sources, reducing valuable potable water used for non-potable purposes, and minimizing strain on wastewater systems.

Despite growing interest in incorporating onsite non-potable water systems to meet broader One Water goals, a lack of public health-based state or national standards, streamlined permitting processes, and regulatory guidance for ONWS has created barriers to implementation. The National Blue Ribbon Commission (NBRC) is focused on creating tools and resources that can support implementation of this sustainable water strategy and foster strong collaborations between water and wastewater utilities and public health agencies to ensure projects protect public health and meet water quality standards.

The NBRC builds upon years of work beginning in 2014 by several municipalities, water utilities, public health officials, The Water Research Foundation, and the US Water Alliance. At the White House Water Summit in 2016, the NBRC announced its commitment to accelerate the development of ONWS. Since 2016, the NBRC has made significant research contributions and continues to advance policies and regulations for onsite water reuse.

The commission is comprised of representatives from municipalities, water utilities and public health agencies from 14 states, the District of Columbia, US EPA, and US Army Engineer Research and Development Center, the city of Vancouver, and the city of Toronto. See the full list of [commissioners](#).

Commission Goals

The National Blue Ribbon Commission is convened in partnership with the WaterReuse Association, and is partnered with the US Water Alliance and The Water Research Foundation. It is chaired by the San Francisco Public Utilities Commission. The goals of the commission are to:

- Serve as a forum for collaboration and knowledge exchange on the policies, best management practices, procedures, and standards for onsite non-potable water systems.
- Craft guidance and model policies that establish a framework for water quality criteria, monitoring and reporting requirements, and operational and permitting strategies that are based on risk-based science.
- Develop case making resources for water utilities based on best practices and lessons learned in the design, development, integration, and operation of ONWS to demonstrate how these systems can help utilities meet their One Water goals.

Commission Principles

The National Blue Ribbon Commission is guided by the following principles:

- **Protect public health.** In order to secure a sustainable water future, we need diverse approaches to water management. In all of the work we do, we are committed to protecting public health and ensuring safe, secure, and reliable water use and reuse.
- **Develop science-based policy.** As the commission develops policy recommendations and guidance, it will be driven by risk-based science and research.
- **Utilize a consensus-based approach.** If we align our diverse experiences and expertise, we can achieve the best outcomes. The commission seeks consensus across all of the work we do together.
- **Integrate best practices.** The work of the commission is informed by the best practices in the management, operations, and oversight of onsite non-potable water systems.
- **Honor local context.** The commission sees great value in the development of policy and business models to support the effective adoption of onsite non-potable water systems. At the same time, the commission recognizes and respects that policy and program

implementation will vary based on needs and context at the local and state level.

- Commit to continuous learning. As the adoption of onsite non-potable water systems is evolving, the commission is committed to staying abreast of new science and conducting research. We are inclusive of input from interested stakeholders as we learn together.

Research and Publications

The NBRC has made significant research contributions and advanced policies and regulations for onsite non-potable water reuse over the years. Leveraging funding from The Water Research Foundation (WRF), the Commissioners participated in the development of the following research:

Guidance Manual and Training Materials for Onsite Nonpotable Water Systems (2020): Develops a design and permitting training for onsite nonpotable water systems to identify the skills and knowledge required to design and permit treatment systems that meet the risk-based water quality standards.

Making the Utility Case for Onsite Non-potable Water Systems (2018): Helps utilities and other stakeholder understand the benefits and drivers behind onsite reuse, how other utilities have addressed potential challenges, and best practices for the ongoing operation of these systems.

[A Guidebook for Developing and Implementing Regulations for Onsite Non-potable Water Systems](#)

(2017): Helps develop water quality criteria and standards for ONWS and present pathways for implementation and management of these systems at the local and/or state level.

[Model State Regulation for Onsite Non-potable Water Programs](#)

(2017): Provides template state legislation for establishing regulatory programs for ONWS.

[Model Local Ordinance for Onsite Non-Potable Water Programs](#)

(2017): Provides template local ordinance for establishing regulatory programs for ONWS.

[Model Program Rules for Onsite Non-potable Water Systems](#)

(2017): Provides specific details on implementation of an ONWS, including system design criteria, permitting, cross-connection control, reporting, notification, and enforcement.

[Risk-based Framework for the Development of Public Health Guidance for Decentralized Non-potable Water Systems](#)

(2017): This report establishes scale-appropriate water quality criteria and monitoring for ONWS. The research was funded by WRF and led by the National Water Research Institute (NWRI). Many Commissioners participated in the development of this research study.

[Blueprint for Onsite Systems: A Step-by-Step Guide for Developing a Local Program to Manage Onsite Water Systems](#)

(2014): Describes ten key steps for considering and implementing an ONWS program.

Future Research Priorities

[Operator Certificate Program for Onsite Non-potable Water Systems](#)

(2022, anticipated): Developing an operator certificate program is to build operator capacity and provide the unique training and skills needed to safely operate and maintain onsite non-potable water systems.

Other research is also underway by the National Blue Ribbon Commission, including expanding the risk-based framework, researching pathogen crediting for natural treatment systems, aligning plumbing codes and standards with the risk-based approach, addressing how onsite water systems can play a role in equity and climate change issues, and conducting life cycle assessments evaluating the environmental and economic effects of community-scale onsite water reuse adoption.

National Blue Ribbon Commission inspects the Hasslo & 8th Ecodistrict's onsite water recycling in Portland, OR (2016).

Policy Impacts

As a result of the peer exchange, joint policy development, and rigorous research, there has been a shift in the perspective of many participating public health regulators who now have the appropriate framework and tools to develop regulations. California, Colorado, Minnesota, Washington, and Hawaii are advancing regulations or policies supporting onsite reuse, while others including Texas, Alaska, and Oregon are considering similar steps forward.

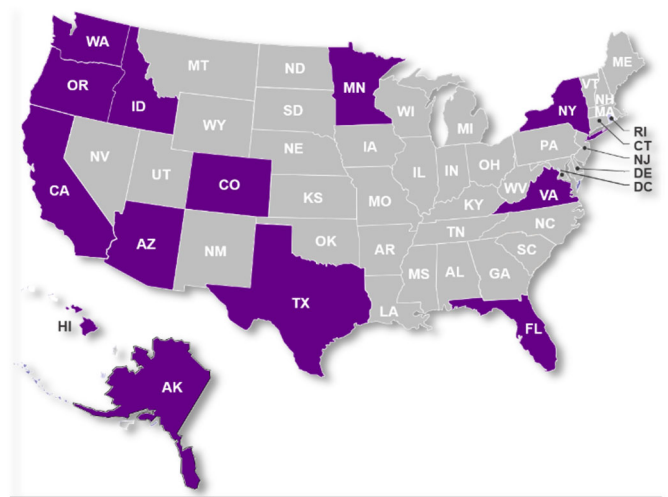

- **San Francisco:** Following the publication of the *Risk-Based Framework for the Development of Public Health Guidance for Decentralized Non-potable Water Systems*, San Francisco updated its [Non-potable Water Program standards](#) to align with the risk-based water quality standards recommended from the report.

- **Minnesota:** Minnesota Department of Public Health has moved forward with guidance for onsite non-potable water systems. A report was published in March 2018 [Advancing Safe and Sustainable Water Reuse in Minnesota](#). Recommendations from Minnesota’s report include adopting the risk-based water quality approach.
- **Colorado:** In August 2018, Colorado Department of Public Health and Environment updated [Regulation #84](#), which regulates reclaimed water use, to allow localized nonpotable water systems to treat onsite wastewater for toilet flushing and irrigation. Colorado adopted a risk-based water quality approach for localized water reuse systems.
- **California:** In September 2018, California signed into law [Senate Bill 966](#), which directs the State Water Resources Control Board to establish risk-based water quality standards for onsite non-potable water systems. The SFPUC collaborated with Senator Scott Wiener to develop the legislation. The work that’s been accomplished to date by the National Blue Ribbon Commission will support the state’s development of the risk-based water quality standards.
- **Hawaii:** Hawaii passed legislation House Bill 444 in 2019 directing the Hawaii Department of Health to adopt a localized set of rules for onsite non-potable water systems with guidance from the National Blue Ribbon Commission.
- **Washington:** In 2021, House Bill 1184 was passed and signed into law. The legislation directs the Washington Department of Health to develop state-wide risk-based water quality standards for the use of onsite non-potable water reuse systems in commercial and multi-family buildings.
- **Texas, Alaska, and Oregon:** These states have expressed conceptual interest in adopting standards for onsite nonpotable systems that align with the risk-based public health guidance.

Commissioners

The National Blue Ribbon Commission for Onsite Non-potable Water Systems is comprised of 43 representatives from municipalities, public health agencies, water utilities, and national organizations who are leading the industry in onsite non-potable water systems. [Commissioners](#) represent Canada and 14 states in the U.S.
