

# The WaterHub<sup>®</sup> at Piedmont Atlanta Hospital

**Location:** Atlanta, GA, USA

**Capacity:** 250,000 GPD

**Technology:** MBR-RO

**Application:** Water Reuse

**Footprint:** 4,500 ft<sup>2</sup>

**Please join NextEra Distributed Water and H<sub>2</sub>O Innovation on Sunday, March 5<sup>th</sup>, 2023 for a tour of the WaterHub<sup>®</sup> at Piedmont Atlanta Hospital.**

This decentralized water reuse system transforms on-site wastewater into clean water for cooling tower and boiler use by intercepting and reclaiming wastewater from the hospital and reusing treated effluent for utility purposes on-site, producing up to 250,000 gallons per day.

This system is designed to **decrease total potable water for the facility by approximately 35%** and **decrease total wastewater discharge by up to 75%**.

Small groups will participate in a guided tour of the facility, explore the technology, learn the background and key drivers behind the development of this system.

**Hosted by:**
